

Session Descriptions

ToolBox

You will be guided through the setup and configuration of SolidWorks Toolbox. Topics will include global settings, working with standards, adding properties, and Smart Fastener behavior.

Mates & Advance Mates

In this session see how to use those mates from to gear and belt mates, width mate, to Hinge mates. Mates! Come and join Mike as he mates away.

Enterprises PDM Admin

You will Explore SolidWorks Enterprise PDM from the Administrator side and see how this innovative and powerful software can help you to manage files.

Simulation

This presentation demonstrates how to best use SolidWorks Simulation to provide accurate and timely results. The presentation will give technical insight of both linear and non linear Simulation tasks.

Drawings (Standards)

This presentation will have you managing line weights, section lines, line types, tangent edges, centerlines, dimensions and much more, like a pro! Create section views and add dimensions in situations that you once thought impossible. All this plus managing dim styles, text and sheet layouts in templates.

Importing into SolidWorks

You have some files you want to use but they were not created in SolidWorks. Come learn how to import non-native files and use them in SolidWorks.

Motion Manager

Attendees will learn the basic skills required to create animations in SolidWorks providing a foundation for further exploration into the SolidWorks Motion Manager. See how to choreograph and build an animation by arranging components and taking snapshots at key moments during a sequence of movement or change.

Increase Productivity

This presentation is intended for all users, this hands-on session explores how to enhance productivity with the tools available inside SolidWorks that you might know are there just don't know how to use.

SW Developers (Surfacing)

In this round table discussion with the SolidWorks developers talk to them about the Surfacing module. Let them know how it does and doesn't do what you would like it to do. Take this opportunity to make suggestions on how they could improve it directly to the people responsible for that part of the software.
