

Session Descriptions

Surfaces (the Unsung Heroes)

This session will give you handy tips for successfully using surfaces in you every day modeling. With just these 3 surface tools in your arsenal you will be the hero!

Display States

Learn when and how to use display states. Gain a better understanding of the configuration/display state connection; when to use them and when to not use them to get the best performance.

Workgroup PDM

Is your file revision control out of control? This presentation may lead you on the road to recovery. Workgroup PDM controls projects with procedures for check out, check in, revision control, and other administration tasks runs inside the SolidWorks environment or as a standalone application inside SolidWorks Explorer.

eDrawings

See how to use eDrawings to share your 3D models and 2D drawings with anyone who has a PC or Mac. Learn how to collaborate with everyone involved in product development by using the options and features available in edrawings.

Libraries

This presentation will show SolidWorks users how to maximize their SolidWorks data libraries so that they can be accessed by other users with limited instruction and maximum efficiency. Learn how to use and create Library features in SolidWorks to enhance productivity and minimize design errors.

Introduction to 3DVIA Composer

Get introduced to the basics of how 3DVIA Composer can be used to simplify the documentation process by leveraging 3D designs in various printed as well as paperless documents, animations and videos. Documentation and design can proceed concurrently thereby increasing efficiency and decreasing time to market.

CircuitWorks

This overview of CircuitWorks which is part of SolidWorks Premium will show how to manipulate printed circuit board (PCB) data from Electrical CAD (ECAD) systems to create a SolidWorks assembly. You will learn how CircuitWorks utilizes the IDF file format to transmit critical design information.

DraftSight

Find out what this new free, feature rich, 2D drafting package is all about. Your favorite 2D commands are all here along with a few cool things from SolidWorks thrown in like mouse gestures! It only takes a few minutes to download and works on Mac and Linux too. "A better way to read, write and share DWG files."

Session Descriptions

SW Developers (PhotoView)

In this round table discussion with the SolidWorks developers talk with them about the PhotoView module. Let them know how it does and doesn't do what you would like it to do. Take this opportunity to make suggestions on how they could improve it directly to the people responsible for that part of the software.
